## **Guide Light Receptacles and Switches for Increased Safety from Top Greener, Inc.**

With safety and security always on the minds of consumers, Top Greener, Inc., a leading online distributor of lighting and home automation products, has released new guide light products. Their line of guide lights safely light the way to improve safety in the dark while maintaining the functionality of a switch or receptacle.

"We see these products being used not just in nurseries or in kids' bedrooms, but they can also be especially useful in care homes and health facilities," says Technical Director Hung Ly. "Where safety in the dark is a concern, these devices find natural application."

Top Greener, Inc. unveiled its two anchor devices for this line earlier this year. The first is a tamper-resistant receptacle. Where use of traditional night lights would occupy one of the outlets, the TOPGREENER outlet leaves both free for use while still providing light. It replaces a standard in-wall receptacle and comes with a child-proof screwless wall plate.

The second anchor devices is a guide light switch. It has a large square on/off paddle to manually control main lights, as well as a square guide light just below.

Both devices feature a low output LED guide light that is bright enough to guide your way at night or in dark areas, without being too disruptive when watching a movie or sleeping. The lights are energy efficient and have a lamp life rating of 50,000 hours.

The guide lights are automatically triggered by a built-in sensor that detects the surrounding light levels. When the light level drops to 2.2 lumens, which is the approximate amount of light in your room just after the sun sets, the guide light is activated.
