Sept 2018

Top Greener, Inc. Continues to Raise the Bar in USB Charging Technology

Top Greener, Inc.'s in-wall USB outlets have always been at the forefront of their extensive lighting, electric and home automation catalog. They were the first to market with Qualcomm Quick Charge technology in in-wall receptacles with their TU1152QC's release in 2016. This device has dual tamper-resistant receptacles with two USB-A charging ports equipped with Quick Charge 2.0 technology.

Since then, Top Greener, Inc. has continued to be the trend setter in USB charging receptacles and was the first to come out with QC 3.0 in-wall charging devices, as well as USB-C in-wall charging devices. In-wall style charging solutions are on trend as they still allow access to outlets and they lend themselves to easy cord organization.

"Being a leader and trend-setter in in-wall charging technology is both rewarding and challenging," says Hung Ly, Director of Technology at Top Greener, Inc. "We have the responsibility to stay on top of fast-paced technology developments but at the same time ensure quality and safety for our consumers."

All TOPGREENER products are UL listed and 2011 NEC code compliant. Taking safety and quality one step further, TOPGREENER products (without Quick Charge technology) are also equipped with their trademark Intellichip technology. "Intellichip is a smart feature in all our USB devices that reads the power needs of each individual device and delivers optimum power at optimum speeds for that specific device, without overcharging or overheating that device," continues Ly. Both USB A and USB C ports have this functionality.

Updates and upgrades to QC 4, QC 4+ and Power Delivery are already in motion. Consumers can expect continued trend-setting USB charging solutions from Top Greener, Inc.
