June 2019

Top Greener Announces the Addition of Surge Protectors

This Spring Top Greener, Inc, introduced two surge protectors to its growing line of lighting, wiring, and home automation products. Originally debuted at CES 2019, these surge protectors are a much-anticipated addition to a market demanding more safety and protection for electronics.

The first is an in-wall surge protector built to protect surges up to 900 joules. It replaces a standard outlet and its LED indicators provide real time monitoring of grounding and surge protection. The outlets are tamper-resistant making it perfectly safe for homes and commercial spaces. The body has a shallow design with rear and side wiring options.

The second unit is a wall mount surge protector with six outlets and three USB ports. This also has LED indicators for real time monitoring of grounding and surge protection, and provides protection up to 900 joules. In addition, there is a daylight sensor that illuminates the three USB ports in the dark. These lights allows for easy guided access in the dark, or when the surge protector is placed in dark areas such as behind a desk or bookshelf.

The USB ports in the surge protector are equipped with Intellichip technology, which reads the power needs of the device to charge efficiently and safely without overpowering or overheating the device. Total output of each port is 2.4A. When all three ports are in use, power is distributed with a maximum output of 6.3A.

Surge protectors can be found on the Top Greener website and Amazon.
